## Growth of a \$10,000 Investment (Institutional Class, Since Inception)

<sup>1</sup> Returns for periods less than one year are aggregate and returns for periods more than one year are annualized. The performance data quoted represents past performance and does not guarantee future results. Current performance may be lower or higher. Performance data current to the most recent month-end may be obtained at [advisor.wilshire.com/wilfunds](http://advisor.wilshire.com/wilfunds). The investment return and principal value of an investment will fluctuate so that shares, when redeemed, may be worth more or less than their original costs. The performance quoted reflects fee waivers in effect, and would have been lower in their absence. Effective April 2, 2013, the Fund name, benchmark, principal investment strategies and principal risks were changed. Consequently, prior period performance may have been different if the new investment strategy had been in effect during these periods.

### All funds may experience periods of negative performance.

<sup>4</sup>The Morningstar Rating<sup>TM</sup> for funds, or "star rating", is calculated for managed products (including mutual funds, variable annuity and variable life subaccounts, exchange-traded funds, closed-end funds, and separate accounts) with at least a three-year history. Exchange-traded funds and open-ended mutual funds are considered a single population for comparative purposes. It is calculated based on a Morningstar Risk-Adjusted Return measure that accounts for variation in a managed product's monthly excess performance, placing more emphasis on downward variations and rewarding consistent performance. The top 10% of products in each product category receive 5 stars, the next 22.5% receive 4 stars, the next 35% receive 3 stars, the next 22.5% receive 2 stars, and the bottom 10% receive 1 star. The Overall Morningstar Rating for a managed product is derived from a weighted average of the performance figures associated with its three-, five-, and 10-year (if applicable) Morningstar Rating metrics. The weights are: 100% three-year rating for 36-59 months of total returns, 60% five-year rating/40% three-year rating for 60-119 months of total returns, and 50% 10-year rating/30% five-year rating/20% three-year rating for 120 or more months of total returns. While the 10-year overall star rating formula seems to give the most weight to the 10-year period, the most recent three-year period actually has the greatest impact because it is included in all three rating periods.

There are risks involved with investing, including the possible loss of principal. In addition to the risks associated with investing, investments in smaller companies typically exhibit higher volatility. In addition to the normal risks associated with investing, international investments may involve risk or capital loss from unfavorable fluctuation in currency values, from differences in generally accepted accounting principles or from social, economic or political instability in other nations. Emerging markets involve heightened risks related to the same factors as well as increased volatility and lower trading volume.
